2.0 16v ST150	2004-07	220	CA 1104	DP 1152	CS 030	CK 1641

* Clutch kit supplied without concentric slave release bearing.

** Early concentric slave release bearings with a 'screw on' fitting to suit the pre-1999 Fiesta are no longer available, however a CS11 can be used by simply removing the 'screw on' type adaptor which is plugged into the hydraulic hose. This modification will mean the hydraulic pipe 'securing bracket' cannot be used. We recommend the use of a nylon tie to secure the hose instead. Alternatively a replacement 'plug in' type hydraulic hose is available, part number BFH5201 for RHD vehicles only.

* Before fitting it is essential the following notes are understood and checks are made: a) Ensure that flat diaphragm finger clutches only mate with curved contact face release bearings and vice versa. b) Curved and flat finger clutches are fully interchangeable provided that the correct release bearing as listed is fitted. c) CA 317 diaphragm and coil spring type clutches are fully interchangeable. d) When replacing Sachs 180mm type parts, always change the cover assembly and release bearing as a pair. ** If fitted with a plastic release bearing carrier that has a 'clip on' fork fitting, use alternative B313

*CA 530 & CA 99 do not interchange. CA 530 may be used instead of CA 99 only if spacing washers (2mm thickness) are installed between the clutch assembly and the flywheel.						
Use CA 99 only on early non vented type flywheels (no air slots at the circumference.)						
To identify CA 99 has short (20mm) width pressure plate drive lugs on cover assembly, CA 530 has longer (60mm) width drive lugs.

	*CA 530 & CA 99 do not interchange. CA 530 may be used instead of CA 99 only if spacing washers (2mm thickness) are installed between the clutch assembly and the flywheel. Use CA 99 only on early non vented type flywheels (no air slots around the circumference.) To identify, CA 99 has short (20mm) width pressure plate drive lugs on cover assembly, CA 530 has longer (60mm) width drive lugs.

* This clutch must be installed by the following method: Use spacers fitted between the cover assembly and flywheel to allow the driven plate to slip and revolve behind the cover assembly. A slight resistance should be felt when turning the propshaft. If the driven plate is fitted too loose, the clutch will slip and burn out. If fitted too tight, the clutch will not release. When the engine revolves, centrifugal force will cause the cover assembly to clamp the driven plate. Under no circumstances adjust the clutch lever setting.

Sana 1.4	1989-92	180	CA 176 *	DP 158	B 091	CK 1006 *
* Different thickness flywheels and clutch types have been used on these applications. Therefore it is essential to check that the correct type of clutch to suit the flywheel is selected. Measure and compare the height of the replacement clutch against the original unit being removed.						
CA 176 & CA 223 = 45mm from flywheel face to top of cover pressing (flywheel thickness = 28mm)						
CA 583 & CA 331 = 40mm from flywheel face to top of cover pressing (flywheel thickness = 31mm)

* Clutch kit supplied without concentric slave release bearing						
** Early concentric slave release bearings with a 'screw on' fitting to suit the pre-1999 Fiesta are no longer available, however a CS11 can be used by simply removing the 'screw on' type adaptor which is plugged into the hydraulic hose. This modification will mean the hydraulic pipe 'securing bracket' cannot be used. We recommend the use of a nylon tie to secure the hose instead. Alternatively a replacement 'plug in' type hydraulic hose is available, part number BFH5201 for RHD vehicles only.
